The sequence reported here is a productive rearrangement of myeloma mopc21. The Suttranslated region (5'ut) of the mopc21 myeloma mopc21. The Suttranslated region (5'ut) of the mopc21 followed in that it probably consists of only three bases. Obtained, but based upon other results using the same sequencing correct. This is further supported by the discovery of another kappa v gene which has a 3 bp 5' ut camsigkab. mopc21 has also undergone an unproductive rearrangement camsigkab. The germline variable region of mopc21 has not been sequenced, loci beginning region is j2. [5] reports the comp. strand. See loci beginning camsigkab for rearranged kappa variable regions; see beginning camsigkab for rearranged kappa genes; and see loci regions. In the sites table cdr-complementarity determining region
mouse cdna to myeloma mopc21 mrna; cdna to myeloma p3 (derived from mopc31) mrna; cdna to myeloma mopc149 mrna; cdna to myelomas mopc41a, mcpc603, s107 & hpc76 mrna (see comment).

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

If Kappa chain V region (Mabl3-1) - mouse (fragment)

NiAlternate names: immunoglobulin light chain
C; Species: Mus musculus (house mouse)
C; Species: Mus musculus (house mouse)
C; Species: 44-Mug-1996 #sequence_revision 13-Mar-1997 #text_change 20-Jun-2000
C; Accession: 568241; 568214
R; Faragai, M.; Kohda, K.; Hamuro, T.; Harada, A.; Yamaguchi, H.; Kamachi, M.; Immanka, Submitted to the EMBL Data Library, March 1994
A; Description: Specific peroxidase activity by formation of an antibody L-chain-porph A; Accession: 568241
A; Molecule type: mRNA
A; Rosidues: 1-218 c.TAK>
A; Cross-references: EMBL:D29670; NID:q473962; PIDN:BAR06141.1; PID:q473963
